

News Release

EMBARGOED UNTIL RELEASE AT 8:30 a.m. EDT, Thursday, August 29, 2024

BEA 24-38

Technical:	Lisa Mataloni (GDP)	(301) 278-9083	gdpniwd@bea.gov
	Kate Pinard (Corporate Profits)	(301) 278-9417	cpniwd@bea.gov
Media:	Connie O'Connell	(301) 278-9003	Connie.OConnell@bea.gov

Gross Domestic Product (Second Estimate), Corporate Profits (Preliminary Estimate), Second Quarter 2024

Real gross domestic product (GDP) increased at an annual rate of 3.0 percent in the second quarter of 2024 (table 1), according to the "second" estimate released by the U.S. Bureau of Economic Analysis. In the first quarter, real GDP increased 1.4 percent.

The GDP estimate released today is based on more complete source data than were available for the "advance" estimate issued last month. In the advance estimate, the increase in real GDP was 2.8 percent. The update primarily reflected an upward revision to consumer spending (refer to "Updates to GDP").

Real GDP: Percent change from preceding quarter

U.S. Bureau of Economic Analysis

Seasonally adjusted annual rates

The increase in **real GDP** primarily reflected increases in consumer spending, private inventory investment, and nonresidential fixed investment. Imports, which are a subtraction in the calculation of GDP, increased (table 2).

Compared to the first quarter, the acceleration in **real GDP** in the second quarter primarily reflected an upturn in private inventory investment and an acceleration in consumer spending. These movements were partly offset by a downturn in residential fixed investment.

Current-dollar GDP increased 5.5 percent at an annual rate, or \$383.2 billion, in the second quarter to a level of \$28.65 trillion, an upward revision of \$23.2 billion from the previous estimate (tables 1 and 3). More information on the source data that underlie the estimates is available in the "[Key Source Data and Assumptions](#)" file on BEA's website.

The **price index for gross domestic purchases** increased 2.4 percent in the second quarter, an upward revision of 0.1 percentage point from the previous estimate. **The personal consumption expenditures (PCE) price index** increased 2.5 percent, a downward revision of 0.1 percentage point. Excluding food and energy prices, the PCE price index increased 2.8 percent, a downward revision of 0.1 percentage point.

Personal Income

Current-dollar personal income increased \$233.6 billion in the second quarter, a downward revision of \$4.0 billion from the previous estimate. The increase primarily reflected increases in compensation and personal current transfer receipts (table 8).

Disposable personal income increased \$183.0 billion, or 3.6 percent, in the second quarter, a downward revision of \$3.2 billion from the previous estimate. **Real disposable personal income** increased 1.0 percent, unrevised from the prior estimate.

Personal saving was \$686.4 billion in the second quarter, a downward revision of \$34.1 billion from the previous estimate. The **personal saving rate**—personal saving as a percentage of disposable personal income—was 3.3 percent in the second quarter, a downward revision of 0.2 percentage point.

Gross Domestic Income and Corporate Profits

Real gross domestic income (GDI) increased 1.3 percent in the second quarter, the same as in the first quarter. The **average of real GDP and real GDI**, a supplemental measure of U.S. economic activity that equally weights GDP and GDI, increased 2.1 percent in the second quarter, compared with an increase of 1.4 percent in the first quarter (table 1).

Profits from current production (corporate profits with inventory valuation and capital consumption adjustments) increased \$57.6 billion in the second quarter, in contrast to a decrease of \$47.1 billion in the first quarter (table 10).

Profits of domestic financial corporations increased \$46.4 billion in the second quarter, compared with an increase of \$65.0 billion in the first quarter. **Profits of domestic nonfinancial corporations** increased \$29.2 billion, in contrast to a decrease of \$114.5 billion. **Rest-of-the-world profits** decreased \$18.0

billion, in contrast to an increase of \$2.3 billion. In the second quarter, receipts decreased \$6.2 billion, and payments increased \$11.8 billion.

Updates to GDP

With the second estimate, an upward revision to consumer spending was partly offset by downward revisions to nonresidential fixed investment, exports, private inventory investment, federal government spending, state and local government spending, and residential fixed investment. Imports were revised up. For more information, refer to the [Technical Note](#). For information on updates to GDP, refer to the "Additional Information" section that follows.

	<u>Advance Estimate</u>	<u>Second Estimate</u>
	(Percent change from preceding quarter)	
Real GDP	2.8	3.0
Current-dollar GDP	5.2	5.5
Real GDI	...	1.3
Average of Real GDP and Real GDI	...	2.1
Gross domestic purchases price index	2.3	2.4
PCE price index	2.6	2.5
PCE price index excluding food and energy	2.9	2.8

First Quarter Wages and Salaries

BEA's standard practice for first-quarter estimates of wages and salaries is to incorporate data from the Bureau of Labor Statistics' Quarterly Census of Employment and Wages (QCEW) program as part of the annual update of the National Economic Accounts. New QCEW data for the first quarter of 2024 will be incorporated in next month's release along with the 2024 Annual Update of the National Economic Accounts (refer to box below for details).

Annual Update of the National Economic Accounts

BEA will release results from the 2024 annual update of the National Economic Accounts, which include the National Income and Product Accounts as well as the Industry Economic Accounts, on September 26, 2024. The update will present revised statistics for GDP, GDP by Industry, and gross domestic income. For details, refer to [Information on 2024 Annual Updates to the National, Industry, and State and Local Economic Accounts](#).

Next release, September 26, 2024, at 8:30 a.m. EDT
Gross Domestic Product (Third Estimate)
Corporate Profits (Revised Estimate)
Gross Domestic Product by Industry
Second Quarter 2024 and Annual Update

Definitions

Gross domestic product (GDP), or **value added**, is the value of the goods and services produced by the nation's economy less the value of the goods and services used up in production. GDP is also equal to the sum of personal consumption expenditures, gross private domestic investment, net exports of goods and services, and government consumption expenditures and gross investment.

Gross domestic income (GDI) is the sum of incomes earned and costs incurred in the production of GDP. In national economic accounting, GDP and GDI are conceptually equal. In practice, GDP and GDI differ because they are constructed using largely independent source data.

Gross output is the value of the goods and services produced by the nation's economy. It is principally measured using industry sales or receipts, including sales to final users (GDP) and sales to other industries (intermediate inputs).

Current-dollar estimates are valued in the prices of the period when the transactions occurred—that is, at "market value." Also referred to as "nominal estimates" or as "current-price estimates."

Real values are inflation-adjusted estimates—that is, estimates that exclude the effects of price changes.

The **gross domestic purchases price index** measures the prices of final goods and services purchased by U.S. residents.

The **personal consumption expenditure price index** measures the prices paid for the goods and services purchased by, or on the behalf of, "persons."

Personal income is the income received by, or on behalf of, all persons from all sources: from participation as laborers in production, from owning a home or business, from the ownership of financial assets, and from government and business in the form of transfers. It includes income from domestic sources as well as the rest of world. It does not include realized or unrealized capital gains or losses.

Disposable personal income is the income available to persons for spending or saving. It is equal to personal income less personal current taxes.

Personal outlays is the sum of personal consumption expenditures, personal interest payments, and personal current transfer payments.

Personal saving is personal income less personal outlays and personal current taxes.

The **personal saving rate** is personal saving as a percentage of disposable personal income.

Profits from current production, referred to as corporate profits with inventory valuation adjustment (IVA) and capital consumption (CCAdj) adjustment in the National Income and Product Accounts (NIPAs), is a measure of the net income of corporations before deducting income taxes that is consistent with the value of goods and services measured in GDP. The IVA and CCAdj are adjustments that convert inventory withdrawals and depreciation of fixed assets reported on a tax-return, historical-cost basis to the current-cost economic measures used in the national income and product accounts. Profits for domestic industries reflect profits for all corporations located within the geographic borders of the United States. The rest-of-the-world (ROW) component of profits is measured as the difference between profits received from ROW and profits paid to ROW.

For more definitions, refer to the [Glossary: National Income and Product Accounts](#).

Statistical conventions

Annual-vs-quarterly rates. Quarterly seasonally adjusted values are expressed at annual rates, unless otherwise specified. This convention is used for BEA's featured, seasonally adjusted measures to facilitate comparisons with related and historical data. For details, refer to the FAQ "[Why does BEA publish estimates at annual rates?](#)"

Quarterly not seasonally adjusted values are expressed only at quarterly rates.

Percent changes. Percent changes in quarterly seasonally adjusted series are displayed at annual rates, unless otherwise specified. For details, refer to the FAQ "[How is average annual growth calculated?](#)" and "[Why does BEA publish percent changes in quarterly series at annual rates?](#)" Percent changes in quarterly not seasonally adjusted values are calculated from the same quarter one year ago. All published percent changes are calculated from unrounded data.

Calendar years and quarters. Unless noted otherwise, annual and quarterly data are presented on a calendar basis.

Quantities and prices. Quantities, or "real" volume measures, and prices are expressed as index numbers with a specified reference year equal to 100 (currently 2017). Quantity and price indexes are calculated using a Fisher-chained weighted formula that incorporates weights from two adjacent periods (quarters for quarterly data and annuals for annual data). For details on the calculation of quantity and price indexes, refer to Chapter 4: Estimating Methods in the [NIPA Handbook](#).

Chained-dollar values are calculated by multiplying the quantity index by the current dollar value in the reference year (2017) and then dividing by 100. Percent changes calculated from real quantity indexes and chained-dollar levels are conceptually the same; any differences are due to rounding. Chained-dollar values are not additive because the relative weights for a given period differ from those of the reference year. In tables that display chained-dollar values, a "residual" line shows the difference between the sum of detailed chained-dollar series and its corresponding aggregate.

Updates to GDP

BEA releases three vintages of the current quarterly estimate for GDP. "Advance" estimates are released near the end of the first month following the end of the quarter and are based on source data that are incomplete or subject to further revision by the source agency. "Second" and "third" estimates are released near the end of the second and third months, respectively, and are based on more detailed and more comprehensive data as they become available.

The table below shows the average revisions to the quarterly percent changes in real GDP between different estimate vintages, without regard to sign.

Vintage	Average Revision Without Regard to Sign (percentage points, annual rates)
Advance to second	0.5
Advance to third	0.6
Second to third	0.3
Note - Based on estimates from 1996 through 2022. For more information on GDP updates, refer to Revision Information on the BEA website.	

Annual and comprehensive updates are released in late September. Annual updates generally cover at least the five most recent calendar years (and their associated quarters) and incorporate newly available major annual source data as well as some changes in methods and definitions to improve the accounts. Comprehensive (or benchmark) updates are carried out at about 5-year intervals and incorporate major periodic source data, as well as major conceptual improvements.

Unlike GDP, advance current quarterly estimates of GDI and corporate profits are not released because data on domestic profits and net interest of domestic industries are not available. For fourth quarter estimates, these data are not available until the third estimate.

GDP by industry and gross output estimates are released with the third estimate of GDP.

r Revised

1. Real gross domestic income is gross domestic income deflated by the implicit price deflator for gross domestic product.

Note. Users are cautioned that particularly for components that exhibit rapid change in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series. For accurate estimates of the contributions to percent changes in real gross domestic product, use table 2.

^r Revised

1. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

2. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.

2. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

3. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Note. Estimates under the *Percent change from preceding year* columns are calculated from annual data. Estimates under the *Percent change from fourth quarter to fourth quarter* columns are calculated from fourth quarter values relative to the same quarter one year prior.

r Revised

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.

2. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

3. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

r Revised

1. Personal income is also equal to national income less corporate profits with inventory valuation and capital consumption adjustments, taxes on production and imports less subsidies, contributions for government social insurance, net interest and miscellaneous payments, business current transfer payments (net), and current surplus of government enterprises, plus personal income receipts on assets, and personal current transfer receipts.

2. Includes actual employer contributions and actuarially imputed employer contributions to reflect benefits accrued by defined benefit pension plan participants through service to employers in the current period.

3. Social security benefits include old-age, survivors, and disability insurance benefits that are distributed from the federal old-age and survivors insurance trust fund and the disability insurance trust fund.

4. Medicare benefits include hospital and supplementary medical insurance benefits that are distributed from the federal hospital insurance trust fund and the supplementary medical insurance trust fund.

5. Consists of nonmortgage interest paid by households. Note that mortgage interest paid by households is an expense item in the calculation of rental income of persons.

6. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

7. Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population.

1. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

2. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2017 current-dollar value of the corresponding series, divided by 100.

3. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross value added and the consumption of fixed capital.

4. The deflator for gross value added of nonfinancial corporate business divided by 100.

Note. Estimates in this table are based on the 2017 North American Industry Classification System (NAICS).
